xSortLab is a program to sort the alphabet of any string. You can use the alphabet, the whole text, or any words you want. The tool shows you the operations that were performed during the sort. It also allows you to change the number of words that will be outputted or the way you want the text will be presented. You can also change the way you want the text to be represented. A default set of colors can be selected or you can select your own set of colors. Each color set is

represented by a unique hex code, which you can change if you want. xSortLab menu: xSortLab offers various options to make the sorting process easier. The menu offers the following options: Visual sort: The visual sort is what most users want. This way, the sorting can be done pretty fast because the text can be visualized as it is being sorted. The tool will then show the operations that were performed and the resulting sequence. You can navigate back and forth, you can change the number of words that you want, and change the

colors and visual formatting of the result. The menu also offers a "Help" option where you can obtain information on every other menu option. You can find more information about the Visual Sort mode here: Time sort: The time sort is what users who are timing themselves or their work use. This option let you sort your alphabet while having control of the amount of time that passes before you perform the next comparison. You can also choose to have the sorted text outputted right away or to have the text posted to your clipboard. Once

the time is over, the sorted text can be pasted in your favorite editor or word processor. Choose: You can choose either to sort the whole string by pressing the "Sort from the end" button or to sort the string from the beginning. You can also change the number of words that will be sorted and the way the text is represented. If you want to limit the amount of comparisons, you can have the end time being the time on which you want to stop the sort. In this case, when the time is over, the sort will be stopped and the end result will be displayed in a pop-

up window. You can use the "Test" button to check the result of the sort. When you

xSortLab is a sorting tool that lets you perform bubble, selection sort, insertion sort, merge sort, quick sort, and visual sort. The sorting can be done either in the visual mode or in the time mode. By using a binary tree to sort, the speed increases by a huge amount. You can even perform the sorting with multiple variables in rows, columns, or vertically. It is very important to note that sort time always increases for a row, column, or vertically sorted variables. Paste, Cut, and Copy

paste functions also make sorting a lot easier. Apart from sorting, xSortLab includes two powerful graphic tools: the graphic tool helps you graphically visualize the sorting process by using a binary tree, and the flag tool allows you to modify sorting modes and to quickly switch between the visual and time sort modes. xSortLab has currently been developed with a support for Windows 10, 8.1, and 7. Tips: Use the move cursor up and down to manipulate your sorting space. Use the left mouse button to position the end of your data. Use the right mouse button

to add or remove the selection brackets. If you have problems with the sorting tool, you can use the Ctrl-F5 keyboard shortcut to restart the application. Sharing xSortLab: It is possible to share this xSortLab for free. To do that, you just have to use the "Share" function of your browser and then save the link to your hard drive. If you have a program that is compatible with the Send to Kindle button, you can save the page on your Kindle or smartphone.
